

DISTRIBUTION LIVE INVENTORY

This module is used to check the availability of **Distribution Inventories** across warehouses.

Filter Options

You can filter the data by:

- Warehouse
- Product / Model
- Storage
- Color

Availability View

Next to each product, the system displays detailed stock information, including:

- **Live Physical Inventory:** Quantity physically available in the warehouse.
- **In Transit:** Stock shipped from another warehouse but not yet received in the current warehouse.
- **Balance Quantity:** $(Live\ Physical\ Inventory + In\ Transit) - (Allocated + Committed)$

“ Represents the quantity that **is or will be available** in the warehouse.

- **Ready Stock:** $(Live\ Physical\ Inventory - (Allocated + Committed + Booked))$

“ Represents the quantity that is **immediately available for scanning**.

- **Allocated:** Quantity scanned or reserved in orders, but not yet packed.
- **Committed:** Quantity scanned and packed in an order.
- **Booking:** Quantity reserved for an order where stock is insufficient, so it is kept on hold.

Order-Level Details

By clicking on a **product**, you can view the **orders** in which that product is Allocated, Committed, or Booked.
