

Area to Area

AREA TO AREA is used to move a container from its current area to another area within the warehouse.

Steps:

1. Select the **From Area** where the container is currently located.
2. Select the **To Area** where the container needs to be moved.
3. Select or scan the **Container** to be transferred.

Once the process is completed, the container is successfully transferred to the new area and the system is updated accordingly.
